

NextGen Cable

How to install the app on Google TV, Android TV, Fire TV and TV boxes

NextGen Cable running on a Chromecast with Google TV, showing the channel list.

Download link (type it or scan the code)

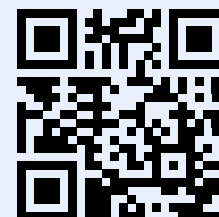

<https://tv.bulkbazaar.ca/get>

If the short link doesn't work, use the full link:

<https://github.com/NaseerBabar786/live-tv-app/releases/latest/download/LiveTV.apk>

The app file is called **LiveTV.apk** and is about **27 MB**. The link always gives you the newest version.

Website: **<https://tv.bulkbazaar.ca>** (watch channels in a browser, download the app and read these steps)

Why the extra steps? NextGen Cable is not in the Google Play Store, so Android treats it as an app from an "unknown source". You allow this once per device, and Google Play Protect may show a warning that you can safely skip for this app.

1. Google TV, Chromecast with Google TV and Android TV

TVs don't have a normal web browser, so you use the free **Downloader** app to get the file.

A. Install Downloader (one time only)

- 1 On the TV home screen, open **Search** (or **Apps > Search for apps**) and search for **Downloader**. Install **Downloader by AFTVnews** (orange icon).

B. Allow Downloader to install apps (one time only)

- 1 Open **Settings** (gear icon at the top right) > **System** > **About**.
- 2 Scroll down to **Android TV OS build** and press **OK** on it **7 times** until you see "You are now a developer". This unlocks the next setting.
- 3 Go back to **Settings > Apps > Security & restrictions > Unknown sources**.
- 4 Turn on **Downloader**.

On some older Android TVs the switch is at **Settings > Device Preferences > Security & restrictions > Unknown sources**.

C. Download and install NextGen Cable

- 1 Open **Downloader**. Allow it to access files if it asks.
- 2 In the box on the **Home** tab, type **tv.bulkbazaar.ca/get** and press **Go**. If that gives an error, type the full link instead:
github.com/NaseerBabar786/live-tv-app/releases/latest/download/LiveTV.apk
- 3 Wait for the download to reach about **27 MB**.
- 4 Press **Install**. If Play Protect warns you, choose **Install anyway**.
- 5 Press **Open**, or **Done** and then **Delete** to remove the downloaded file and free up space.
- 6 NextGen Cable now appears in your **Apps** list. To pin it to the home screen, highlight it, hold **OK** and choose **Add to favourites**.
- 7 Open NextGen Cable and sign in once: with **Google** (the TV shows a code; on your phone or computer go to **google.com/device** and enter it) or with **any email** and a password.

2. Other Android TV devices

Amazon Fire TV and Fire TV Stick

- 1 Install **Downloader** from the Amazon Appstore (search for "Downloader").
- 2 Go to **Settings > My Fire TV > Developer options > Install unknown apps** and turn on **Downloader**. If you don't see Developer options, open **Settings > My Fire TV > About** and press **OK** on your device name 7 times.
- 3 Follow part **C** of section 1 above.

Android TV boxes (Nvidia Shield, Xiaomi Mi Box, TCL, Sony, Hisense and others)

Use the Google TV steps in section 1. The menu names can differ slightly. Look for **Security** or **Security & restrictions** and allow **Unknown sources** for Downloader.

NextGen Cable is made for TVs: it works on Android TV devices with Android 5.0 and newer. The phone version is paused for now. It does **not** work on Apple TV, Roku or Samsung/LG smart TVs that don't run Android.

3. Using NextGen Cable

On the channel list	
Pick a channel	Move with the arrow buttons, press OK to watch
Modes	Modes menu at the top: 1+List (Free), or with Gold 1+3, 1×2, 2×2, 2×3, Browse, News and more
Filter by genre	Use the row at the top: All, News, Sports and so on
Preview	The highlighted channel plays on its card; the speaker button mutes it
Favourite a channel	Hold OK on it (Gold). The Favourites button shows only them
Settings	Gear, top right: channel list, countries, languages, playlists
While watching	
Next / previous channel	Down / Up on the remote (or Channel +/-)
Back to the list	Back button: you return to the channel you were watching

Free and Gold. **Free** gives you every channel in the 1+List layout. **Gold** (\$9.99 a month) adds every other mode (up to 6 channels at once), full screen, Favourites, the Library of movies and dramas, Games and more. New viewers get **7 days of everything free**, and on Free you can try a Gold feature for 1 minute.

4. Updating to a new version

- 1 Open NextGen Cable. When it starts, it checks for a new version and downloads it by itself (**Updating NextGen Cable**).
- 2 The first time, Android may ask you to allow NextGen Cable to install apps. Turn it on and press Back; the update carries on.
- 3 Android then shows its own install screen. Select **Install** (or **Update**), and **Install anyway** if Play Protect asks. Your favourites and settings are kept.

Versions before 1.8.28 ask first: select **Update now** once.

5. If something goes wrong

"App not installed"	An older copy signed differently is on the device (versions before 1.7.2). Uninstall NextGen Cable once, then install again. After that, updates install over the top.
"There was a problem parsing the package"	The download was incomplete or saved a web page instead of the app. Delete it, download again, and check the file is about 27 MB. Try the full link instead of the short one.
Blocked by Play Protect	Tap More details, then Install anyway.
"Install unknown apps" message	Allow Downloader to install apps, as in part B of section 1.
A channel doesn't play	The broadcaster may be offline, or the channel only plays inside its own country (marked Geo-blocked). Try again later or pick another channel.
No channels, or a loading error	Check the internet connection, then reopen the app.
